Why *Art & Science* ?

When asked why he gave the title, *The Art of Computer Programming*, to his famous series of books, Donald Knuth said:

"Science is what we understand well enough to explain to a computer and art is everything else."

Knuth, Donald. *Computer Programming is an Art*. Communications of the ACM. December 1974.

29 November 2004 The Art & Science of Software Process 2

What is a Software Process?

It starts with a *business need*—an idea.
It ends with a *solution* that meets the stated need.
It covers *all* activities from start to end.

29 November 2004

The Art & Science of Software Process

3

What is the Goal of the Process?

Make commitments that you can keep.
Produce software on-time and on-budget.

To paraphrase Peter Drucker:
The process serves to organize the participants of software work to create value.

Drucker, Peter F. *The Essential Drucker*. Harper Business. New York, NY. 2001.

Challenges

© 2004, Steven Tabb. All Rights Reserved.

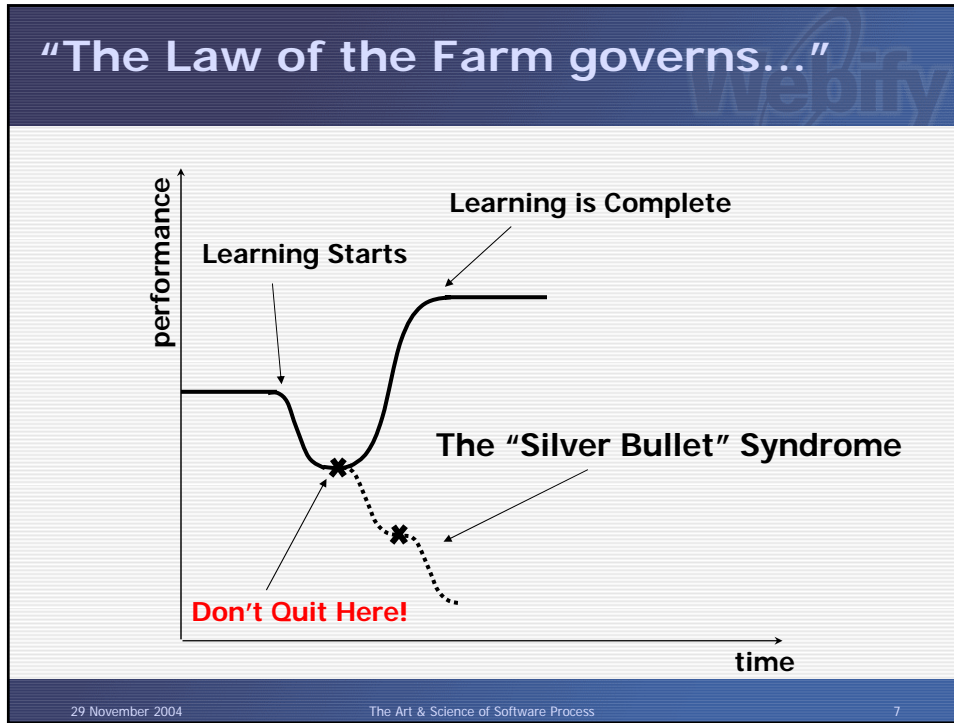

The system is in motion...

Observation: **continuous**
Orientation: **continuous**
Decision: **swift**
Action: **precise**

Coram, Robert. *Boyd: The Fighter Pilot Who Changed the Art of War*. Little, Brown, and Company.

29 November 2004 The Art & Science of Software Process 6

"I'm a fast learner..."

© 2004, Steven Tabb, All Rights Reserved

Crawl, walk, run!
An accomplished walker doesn't think about the mechanics of the steps anymore.

Learning Dilemma
We learn best from experience but we never directly experience the consequences of many of our most important decisions.

Senge, Peter. *The Fifth Discipline*. Pg. 23. Currency Doubleday. New York, NY. 1990.

29 November 2004 The Art & Science of Software Process 8

What does it mean: "To Know?"

0th Order of Ignorance: Lack of Ignorance.
 You know.

1st Order of Ignorance: Lack of knowledge.
 You know the question. Uncertainty.

2nd Order of Ignorance: Lack of awareness.
 This is a real problem: not only you don't know the answer, you don't even know what the question is. Ambiguity.

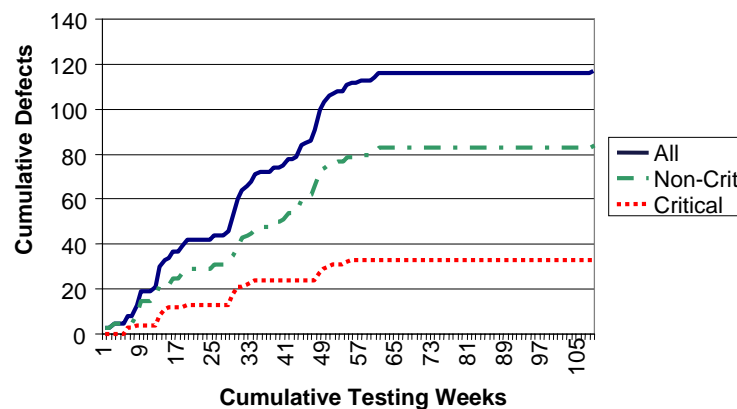

3rd Order of Ignorance: Lack of process.
 You don't have a process to find out what it is that you don't know.

4th Order of Ignorance: Meta Ignorance. You don't know about the orders of ignorance. You are past this. 😊

Armour, Phillip G. *The Five Orders of Ignorance*. Comm. of the ACM. Vol.43. No.10. Oct. 2000.

"We'll get the defects out in testing..."

Voyager Spacecraft Total Defects in System Test

"Just give me the process to follow..."

Execution: carrying out a process without much thinking or judgment. (A computer executes a program.)

"Unencumbered by the thought process."

Enactment: carrying out a process with understanding of each step and using the process as a guide.

"If the map and the terrain don't match, trust the terrain."

Thanks to Click & Clack, *The CarTalk Guys* on National Public Radio.

The Art & Science of Software Process

11

That's different! That's crazy!

"We should do something when people say it is crazy. If people say something is 'good,' it means someone else is already doing it."

» Hajime Mitarai, president, Canon

Peters, Thomas J. *The Circle of Innovation, You Can't Shrink Your Way To Greatness.*
Vintage Books. New York, NY, 1997.

29 November 2004

The Art & Science of Software Process

12

Orphans Preferred!

“Wanted: Young, skinny, wiry fellows not over 18. Must be expert riders willing to risk death daily. Orphans preferred. Wages \$25 per week.”

- Pony Express advertisement, 1860.

McConnell, Steve. *After the Gold Rush*. Microsoft Press. 1999.

29 November 2004

The Art & Science of Software Process

13

Anything changed in over 140 years?

“We realize the skills, intellect and personality we seek are rare, and our compensation plan reflects that. In return we expect TOTAL AND ABSOLUTE COMMITMENT to project success—overcoming all obstacles to create applications on time and within budget.”

- Software Developer Advertisement, Seattle Times, 1995.

McConnell, Steve. *After the Gold Rush*. Microsoft Press. 1999.

29 November 2004

The Art & Science of Software Process

14

What are the lessons of a disaster?

What do you know to be *important* but are *unable* to measure?

- Back in October of 1707 it was longitude
- Longitude: How far east or west you are?
 - ✓ Guessing average speed, or dropping a log over the side of the boat and measuring time of travel from bow to stern.
- Admiral Clowdisley Shovell misjudged longitude.
 - 4 warships and 2,000 lives were lost

Buckingham, Marcus, Curt Coffman. *First, Break All The Rules*. Simon & Schuster. NY, NY. 1999.

29 November 2004

The Art & Science of Software Process

15

What is Your Software Development Performance?

Have you been thinking about it before?

- Do you know your "*batting average*?"

Software Development Performance is the complexity of all activities that an individual or team does in order to create software.

An **understanding** of your performance is the basis of making good estimates.

29 November 2004

The Art & Science of Software Process

16

Proposition

© 2004, Steven Tabb. All Rights Reserved.

The Individual is the Key!

Better people create better software.

- ✓ The quality of the people is still the most important factor according to Barry Boehm, author of *Software Engineering Economics*.

All participants in the software development process need the necessary skills to increase their own development capability.

© 2004, Steven Tabb. All Rights Reserved.

Personal Mastery (Personal Process)

© 2004, Steven Tabb. All Rights Reserved.

Senge, Peter. *The Fifth Discipline*. Currency Doubleday. New York, NY. 1990.

Personal Software Process

Personal

- It is *your* process. If there is something that you don't like, then *you* need to change it!

Software

- A personal process applied to software development.

Process

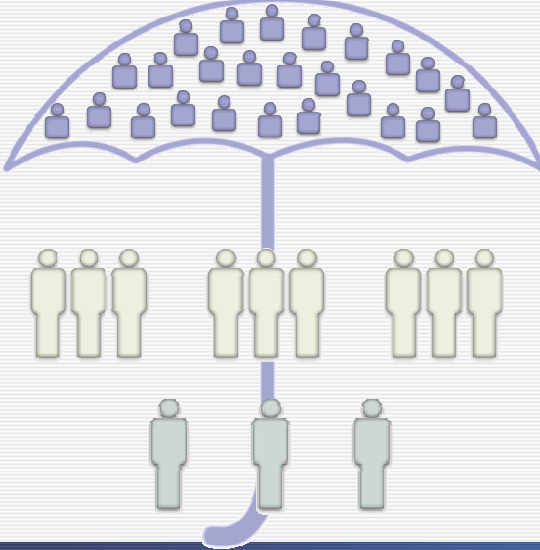

- "A series of actions, changes, or functions bringing about a result."

Anybody who creates a deliverable that could have defects can benefit from a personal process.

Humphrey, Watts S. *A Discipline for Software Engineering*. Addison-Wesley. Reading, MA. 1994.
Excerpted from *The American Heritage® Dictionary of the English Language*

29 November 2004 The Art & Science of Software Process 20

Success Hinges On The Individual

Capability Maturity Model (CMM): Focuses on the organization's capability; management actions.

Team Software Process (TSP): Focuses on team performance; product development.

Personal Software Process (PSP): Focuses on individual skills and discipline; entirely personal.

29 November 2004 The Art & Science of Software Process 22

DISTINCT ... OR EXTINCT!

“If there is nothing very special about your work, no matter how hard you apply yourself, you won’t get noticed and that increasingly means you won’t get paid much, either.”

Michael Goldhaber, *Wired*

LOW PRODUCTIVITY KILLS!

“However low its wages, a business [...] is unlikely to survive, let alone prosper, unless it measures up to the standards set by the leaders in its field, anyplace in the world.”

Peter F. Drucker

Focus on Yourself 

You are **special!**

Think of yourself as:

Me, Inc.

- Even if you happen to be on somebody's payroll at the moment!

Peters, Thomas, J. *Brand You 50: Fifty Ways to Transform Yourself from an "Employee" into a Brand that Shouts Distinction, Commitment, and Passion.* Knopf/Random House, 1999.

29 November 2004 The Art & Science of Software Process 25

Work To Your Talents 

What is a talent?

"A talent is a recurring pattern of thought, feeling, or behavior that can be productively applied."

Every role performed at excellence requires talent.

"Michelangelos of housekeeping."

Buckingham, Marcus, Curt Coffman. *First, Break All The Rules.* Simon & Schuster. NY, NY. 1999.
Peters, Thomas J. *The Circle of Innovation.* Random House. New York, NY. 1997.

29 November 2004 The Art & Science of Software Process 26

Make Non-Talents Irrelevant

"People don't change that much. Don't waste time trying to put in what was left out. Try to draw out what was left in. That is hard enough."

– wisdom from great managers

Team up people with complimentary talents.

Buckingham, Marcus, Curt Coffman. *First, Break All The Rules*. Simon & Schuster. NY, NY. 1999.

Elements of High-Performance Software Development Practice

© 2004, Steven Tabb, All Rights Reserved

Defined Process

A process is defined if it is:

- Written down;
- Has enough detail that it can be enacted repeatedly producing the same or very similar outcome.

A process must be defined for any measurement to be meaningful.

© 2004, Steven Tabb, All Rights Reserved

29 November 2004 The Art & Science of Software Process 30

Planning

Why?

- The plan is the basis of commitments.
- To be successful you must be able to make commitments that you can meet—at a profit.

What is a plan?

- It is the amount of work that needs to be done to achieve the desired outcome.

How?

- Plan in detail. Task length: 45-90 minutes.

© 2004, Steven Tabb. All Rights Reserved.

29 November 2004 The Art & Science of Software Process 31

A Word From The Weary

"You can be sure our plan was perfect. It's just our assumptions were wrong."

Ken Olsen

Founder & CEO
DEC (for 35 years)
1991

Prototyping Culture

Webify

“At Sony the mean time to prototype is an astonishing five days. Competitors take several months, at best, to do the same.”

Peters, Thomas J. *The Circle of Innovation*. Random House. New York, NY. 1997.

29 November 2004

The Art & Science of Software Process

33

Research vs. Development

Webify

Research

- Inventing something new, that has never existed.
- It can only be time limited.

Development

- Use existing technology, or implement an invention.
 - ✓ Can be planned & scheduled; it has been done before.

Library research and learning can be planned.

29 November 2004

The Art & Science of Software Process

34

Context

What is context?

- Everything that is said, done, drawn, or written during the software development process.

How much context do you need?

- Just enough to always know where you are with the work and to know what to do next.

© 2004, Steven Tabb, All Rights Reserved

29 November 2004 The Art & Science of Software Process 35

Effective On-Task Time (EOT)

The time effectively spent on project work.

Doesn't include:

- Reading email (usually even if it is project related)
- Meetings (except well-defined project meetings)
- Lunch time, breaks, phone conversations, etc.

Measure your EOT per week.

- Best organizations in the world get 20+ hrs/week.
- You may only get about 3-5 hrs/wk the first week. You should get up to 15 hrs/wk in a few weeks.

© 2004, Steven Tabb, All Rights Reserved

29 November 2004 The Art & Science of Software Process 36

Estimation

Size (e.g. KLOC): estimate only this!

- Calculate time, schedule, & defects based on size.

Time (project hours)

- Calculate time based on past productivity data.
- Estimate productivity if past data is not available.

Schedule (map project hours to calendar days)

- Schedule is the time available for project work.

Defects (e.g. Defects / MLOC)

- Estimate defects using past defect injection data.

© 2004, Steven Tabb, All Rights Reserved

29 November 2004 The Art & Science of Software Process 37

Quality Planning

You must change your process to change your results!

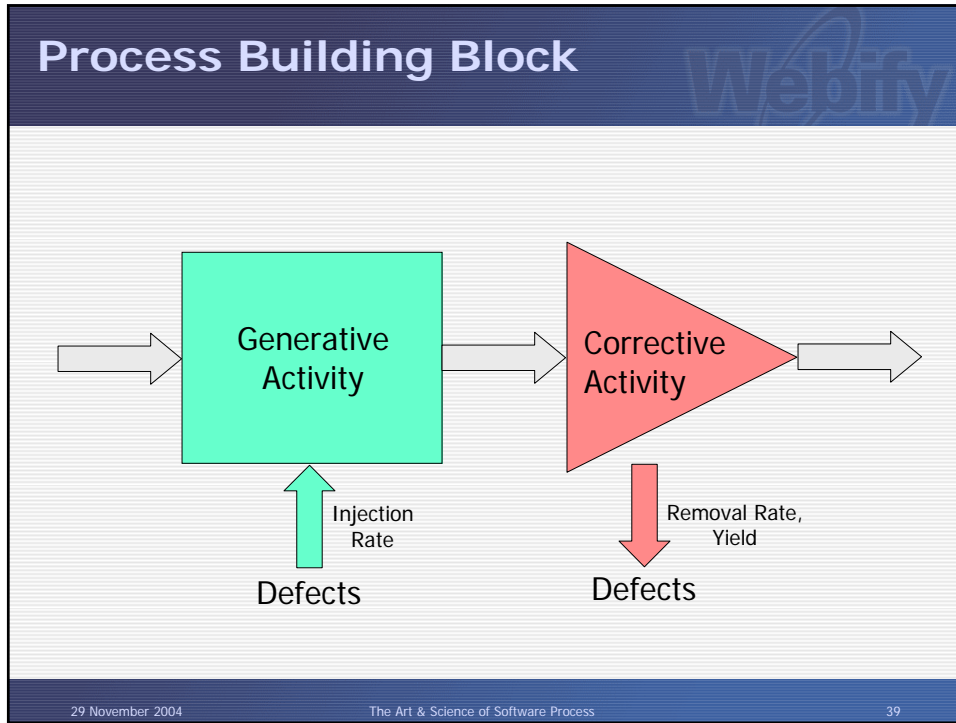

✓ What is insanity? Doing the same thing over and over and expecting a different result!

You know that you will put the defects in, might as well plan to remove them.

Understand what it really takes to do things!

29 November 2004 The Art & Science of Software Process 38

Broken Windows & Software?

The brainchild of criminologist James Q. Wilson and George Kelling.

- Crime is the inevitable result of disorder.
- If one window broken, soon more will be broken.

Applies to software equally well...

- One defect is followed by other defects.

- NOT Microsoft Windows.

Gladwell, Malcolm. *The Tipping Point: How Little Things Can Make A Big Difference*. Pg. 141. Little, Brown, and Company. New York, NY 2000.

29 November 2004 The Art & Science of Software Process 40

Conclusions

© 2004, Steven Tabb, All Rights Reserved

Is it *Art & Science*?

It is both *Art & Science* and it will be.
As we understand more about:

- software development,
- people,
- processes,
- relationship to other domains

...we will continually evolve part of the *Art* into *Science* and we will always discover new *Art* that we need to master...

29 November 2004 The Art & Science of Software Process 42

© 2004, Steven Tabb, All Rights Reserved

What is Enough Process Change?

Continuous and *Discontinuous* at the same time!

You need to **know** and **understand** what your process **is** before you can improve your results!

Improvement isn't possible if your process doesn't change; "working hard" doesn't work.

29 November 2004

The Art & Science of Software Process

43

Your Theories (Assumptions) Lead You

What you do depends on your thinking!

Getting more desirable **results** means you have to change the way you **think** and **act**.

It is better if you know your performance than if somebody else does.

29 November 2004

The Art & Science of Software Process

44

The Stockdale Paradox

Retain faith that you will prevail in the end, regardless of the difficulties. **AND at the same time** Confront the most brutal facts of your current reality, whatever they might be.

Collins, Jim. *Good to Great*. Harper Business. NY, NY. 2001.

29 November 2004 The Art & Science of Software Process 45

Closing Quote

*This above all: to thine ownself be true,
And it must follow, as the night the day,
Thou canst not then be false to any man.
Farewell: my blessing season this in thee!*

- Polonius in Hamlet by William Shakespeare
